WORK EXPERIENCE

Front-end developer
IdeaBit

01/2024 - Present *Jabalpur , India*

Led the development of over 10 responsive, user-centric websites with a focus on scalability and maintainability.Collaborated with cross-functional teams, including product managers and designers, to define software requirements and ensure alignment with business objectives.Delivered high-performance web solutions using HTML5, CSS3, JavaScript, and modern frameworks, optimizing for speed and accessibility across all devices.Conducted peer code reviews to promote a culture of code quality and knowledge sharing within the team.

EDUCATION

Master in Computer Application
Jain University, Bangalore

07/2022 - 07/2024 *8.6 SGPA*

Bachelor in Computer Application
Rani Durgavati Vishwavidyalaya, jabalpur

08/2018 - 08/2021 *62%*

TECHNICAL SKILLS

HTML5	CSS
javaScript	React js
Bootstrap	Firebase
Secure coding	scalable architecture
unit testing	Agile methodologies
cross-functional teamwork	

PROJECTS

GatherX (Ongoing – In-House Video Call App)

- I am developing **GatherX** , an in-house video calling application for our company, using **React** for the front end and **Firebase** for user authentication and email verification. After successful verification, video calls are conducted peer-to-peer through **WebRTC** , ensuring a seamless and secure communication experience. The project focuses on building a responsive UI and optimizing performance for real-time interactions, making it a reliable internal communication tool.

ChatBotify - Generative AI-Powered Web Application

- Developed a web application that leverages generative AI to provide real-time answers to user queries. Using HTML, CSS, and JavaScript for the frontend, the app integrates an external API to process natural language and generate accurate responses. This project demonstrates my expertise in building interactive user interfaces, integrating generative AI models, and ensuring smooth API functionality for enhanced user engagement.

Rj International

- I created a website for RJ International, a freight forwarding company. The site showcases the company's services and operations, offering a professional online presence. I developed the website using HTML, CSS, and JavaScript, and implemented an SMTP contact form, enabling visitors to directly send messages to the client's email. This allows seamless communication between the company and potential client

Recipe Finder App

- I developed a web-based **Recipe Finder App** that allows users to search for food recipes by leveraging an **API** and **AJAX** to fetch real-time data. When a user searches for a dish, the app displays several recipe options along with a "**Show More Info**" button for each. Upon clicking the button, two pop-up windows appear: one shows the ingredients with their measurements, while the other provides a description of the dish, including an embedded YouTube video poster for easy access to cooking tutorials. This project demonstrates my ability to work with APIs and dynamic user interfaces.scores in real time.
